3. INTRODUCTION

Background to the Problem

The rapid growth of e-commerce has brought forth the need for specialized platforms which will cater to niche markets. This includes the sale of computer hardware. The generalized large e-commerce platforms are offering a host of products without minding whether such a platform would be able to meet the needs of consumers of laptops, monitors, CPUs, and GPUs, among others, that require very specific details about specifications, comparisons, and reviews.

The core of the problem is consequently rooted in the fragmented and generalized level of the existing solutions. For instance, many consumers have difficulties finding a platform where, in addition to having well-described products, it is easy to navigate, compare prices, and make purchases without much hassle. This predicament is important to address since buyer confidence, satisfaction, and efficiency in purchasing computer hardware online depend on it.

Solution to the Problem

The solution to these problems is an e-commerce website dealing with laptops, monitors, CPUs, and GPUs. It will also provide full product description, filtering, comparison, and reviews for informed customer decisions. More than this, the comfortable, secure, and intuitive interface will create a pleasant experience for users.

It is an apt solution because all the pain points of the problem will be covered, for example, inability of consumers to get in-depth information about the product and an interface optimized for comparative technical product shopping. Business objectives supported: the attraction of very specialized market; increasing customer satisfaction and repeat business due to this customized way of shopping.

Overview of the software

- Following is a description of the proposed ecommerce platform:
- Full-page display of featured and trending products in the home page

- Filters, sorting options, display of specific pages of products: Laptops, monitors, CPU, GPU
- Order page: Checkout and tracking.
- User Account: Personalized recommendations of products based on customer interest, purchase history
- Quick find: Search anything
- Cart and Wishlist: For users' convenience.
- Contact: Reach out to us (customer support)

Related Works and Proposals

Currently, Amazon and Newegg can sell computer hardware, but they do not have the specificity for the needs that tech enthusiasts and professionals require. Similarly, sites like PCPartPicker have component compatibility tools but support no full-fledged e-commerce experiences. Our solution will bridge the gap between comprehensive product information and an intuitive shopping experience, addressing the shortcomings of the above solutions.

4. REQUIREMENT SPECIFICATION

4.1 System Features

4.1.1. User register

Functional Requirements:

1.1 New users will have to (customers) provide username, email address, phone number and password to register in the website

1.2 After registration the user will be automatically logged in to the website.

Priority Level: High

Precondition: All the details needs to be filled out in the registration form.

4.1.2. User Login

Functional Requirements:

2.1 Users need to provide the email address and password to log in to the website.

2.2 If the credentials are invalid, a popup will show in top saying incorrect email address or password.

Priority Level: High

Precondition: All input fields need to be populated with valid credentials in login form

4.1.3 Browse Products:

Functional Requirements:

- 3.1 User can browse all the products or only a specific product category by selection (Laptop/Monitor).

Priority Level: High

Precondition: None explicitly stated, but access to the product catalog and categories should be available.

4.1.4 Add Product to cart

Functional Requirements:

- 4.1 User can click the cart button on product and it will get added to the cart.
- 4.2 User can go to their cart and view all the products they have added to the cart there.

Priority Level: High

Precondition: User must be logged in with their account

4.1.5 Removing product from cart

Functional Requirements:

- 5.1 If a user wants to remove a product from the cart they can remove it by clicking the X button on top of the product and the product will no longer be on the cart.

Priority: High

Precondition: User needs to be logged in.

4.1.6 Update product from cart:

Functional Requirements:

- 6.1 If a user wants to update a product from the cart he/she can update it from the cart option.

Priority: High

Precondition: User must be logged in, and the product must already exist in the cart.

4.1.7 Searching for a product

Functional Requirements:

7.1 User can search for a specific product by typing name of it in the search bar. If any product is available with the name entered by user the product will be showed.

Priority: High

Precondition: None explicitly stated, but a search bar must be available

4.1.8 Feedback system

Functional Requirements:

8.1 User can contact with us. If any user facing any problem he/she can tell us about their problem. They also can give comment about our product.

Priority: Medium

Precondition: User must be able to access the feedback form.

4.1.9 Place to order:

Functional Requirements:

9.1 If you want to order any product you can order it by giving you address phone and payment method. We have 4 payment method (cash on delivery, credit card, Paytm and PayPal). Then you must place order and after that your order will be confirm.

Priority: High

Precondition: User must provide an address, phone number, and payment method.

4.1.10 Check Your Order

Functional Requirements:

10.1 If you order anything from the website. you can check it from orders button

Priority: High

Precondition: User must have placed an order and be logged in

4.1.11 Accessibility and Notifications

Functional Requirements:

11.1 The system will send notification for your order as a reminder. The notification will be accessible via email and your phone message. Users can configure notification preferences (e.g., email, SMS, or push notifications).

Priority: Medium

Precondition: A valid email address and phone number must be linked to the user account.

4.1.12 User Logout

Functional Requirements:

12.1 User can logout from our system from valid account. After successfully logout or system redirects to the login page

Priority: Medium

Precondition: User must be logged in to log out.

4.2 System Quality Attributes

Usability: Simple and intuitive user registration and login processes, Clear product browsing and search functionality, Easy-to-use cart management features (add, remove, update).

Reliability: Accurate notifications for order confirmation and updates, Robust handling of invalid login attempts with error messages.

Performance: Fast product search and catalog browsing, Minimal delay in adding/removing products to/from the cart.

Scalability: Ability to handle multiple users simultaneously browsing, ordering, or providing feedback.

Security: Secure user authentication and sensitive information handling (passwords, payment methods), Controlled access for actions requiring login (e.g., adding products to cart, placing orders).

Maintainability: Modular features like product browsing, feedback, and order checking ensure ease of updates and debugging.

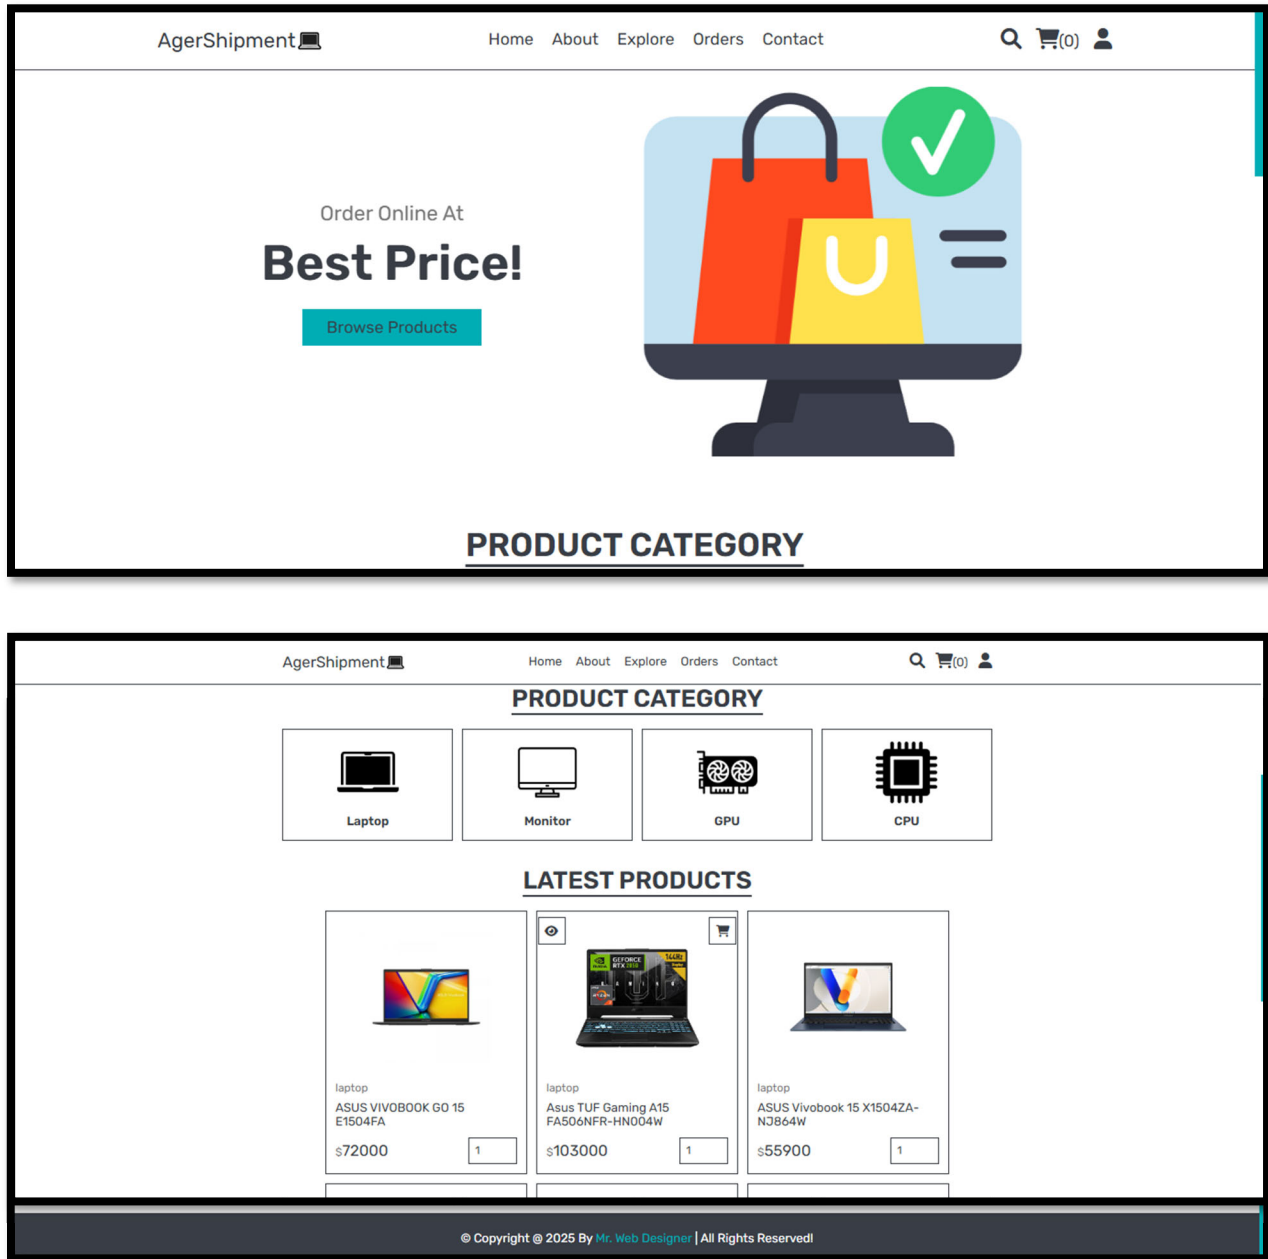

Accessibility: Notifications available via multiple channels (email, SMS), Configurable notification preferences for user convenience.

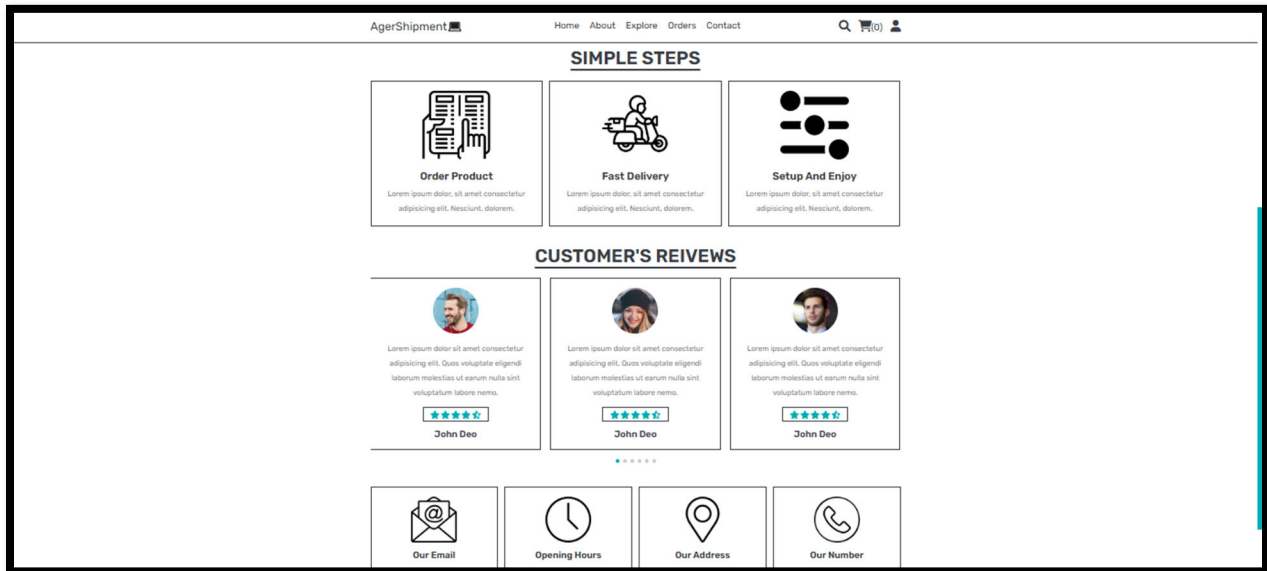

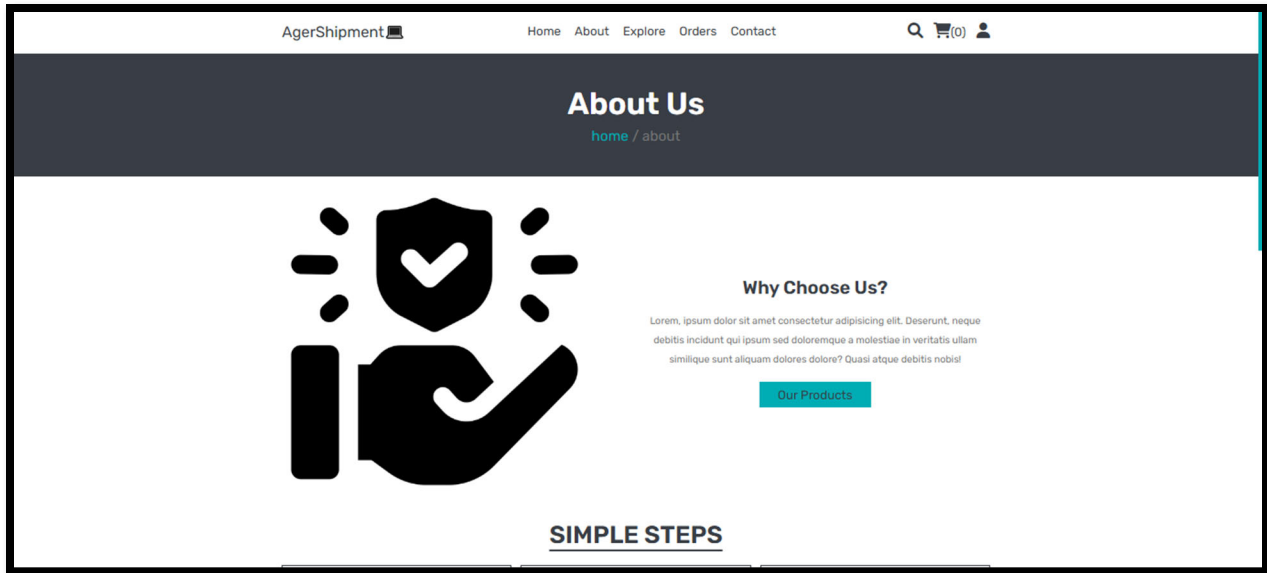

Availability: System ensures continuous uptime to allow product browsing and ordering at any time.

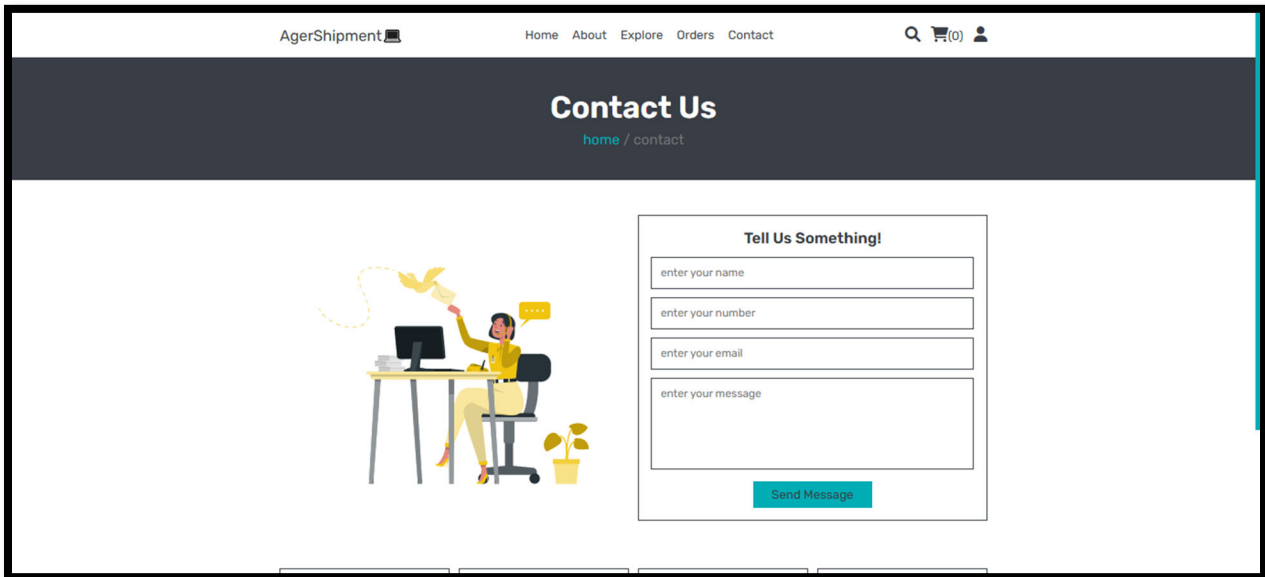

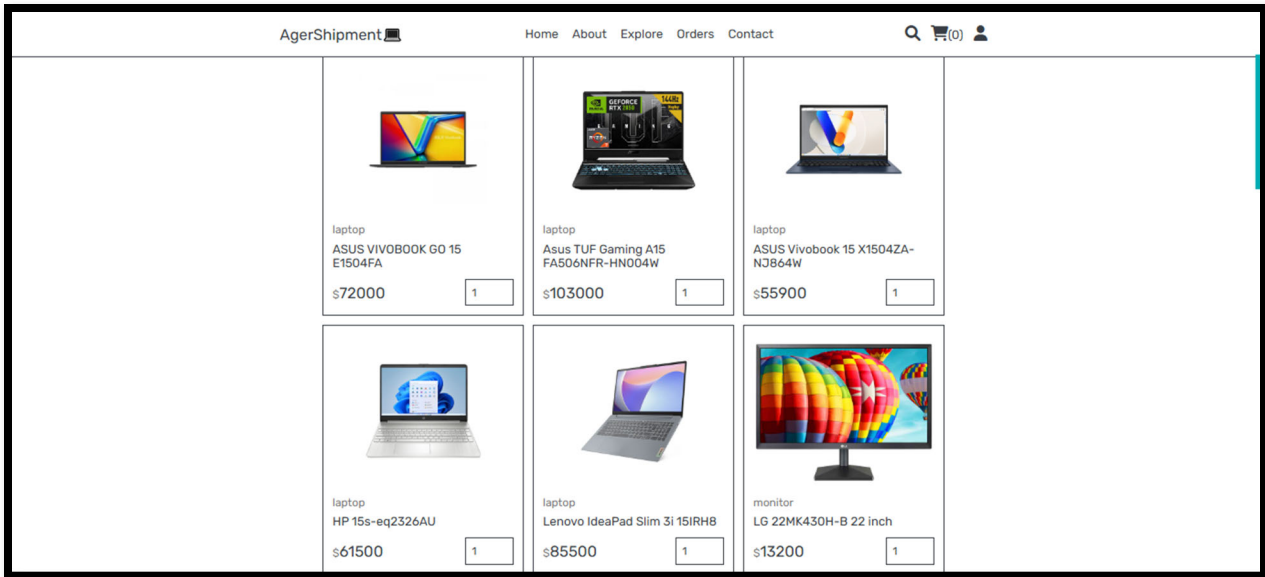

*Flexibility: Support for multiple payment methods (cash, credit card, Paytm, PayPal).
Expandable notification options and payment methods in the future.*

Interoperability: Integration with external systems like email services, SMS gateways, and payment platforms.

4.3 System Interface

4.4 Project Requirements

1. Time Estimation: Total Development Time: 5 months

Phases Breakdown:

- Requirement Analysis & Planning - 1 month
- UI/UX Design - 1 month
- Database & Backend Development – 15 Days
- Frontend Development – 15 Days
- Integration & Testing – 1 month
- Deployment & Bug Fixing – 15 Days
- Final Review & Launch – 15 Days

2. Budget Estimation: Total Budget: 3,60,000 BDT (Adjustable based on resources and complexity)

Breakdown:

Human Resources: 2,40,000 BDT

Backend Developer (1) – 60,000 BDT/month (for 2 months) = 1,20,000 BDT

Frontend Developer (1) – 50,000 BDT/month (for 1 month) = 50,000 BDT

UI/UX Designer – 15,000 BDT/month (for 1 month) = 15,000 BDT

Tester (Manual & Automation) – 25,000 BDT/month (for 1 month) = 25,000 BDT

Project Manager – 30,000 BDT (overall)

Hosting & Server Costs: 30,000 BDT

Cloud Hosting (AWS, Digital Ocean) – 2,500 BDT/month (for 12 months)

Domain & SSL: 10,000 BDT

Domain Name – 3,000 BDT

SSL Certificate – 7,000 BDT

Software & Tools: 15,000 BDT

Paid Libraries, APIs, Frameworks

Marketing & Deployment: 35,000 BDT

Social Media Promotions, Ads, SEO

3. Resources Required

Human Resources:

- 1 Backend Developer (PHP, MySQL)
- 1 Frontend Developer (HTML, CSS, JavaScript)
- 1 UI/UX Designer (Figma, Adobe XD)
- 1 Project Manager
- 1 Tester (Manual & Automation)

Technical Resources:

- Development: PHP (Laravel or Core PHP), MySQL
- Testing: Manual Testing Tools (Postman, Selenium)
- Hosting: AWS/Digital Ocean/Shared Hosting
- Security: SSL Certificate

5. FEATURES NOT TO BE TESTED

The following features will not be tested specifically due to project deficiencies, dependencies, or their indirect impact on the system. Any tests related to these features will be casual and will be in the form of a by-product of other test activities.

Integration: Since the payment system is still subject to development, we cannot perform direct tests on transactions, refunds, or third-party payment API reactions. However, database structures and API request formats will be reviewed to ensure proper data handling.

Third-party AAPI dependence: No facilities relying on the external API (e.g., shipping tracking, tax calculation, or currency conversion) will be tested in isolation. Instead, we will validate the API request formats and integration points so that they correspond to the expected behavior.

Automated email and SMS notifications Due to the boundaries in the email server setup, the direct test of the notification trigger, email formatting, and SMS message will not be distributed. However, to confirm, the system log will be investigated to ensure that information is being triggered correctly.

Performance and load tests While basic functional tests will be done, full-scale performance, stress, and load tests will not be done due to lack of time. We will rely on user response and real-world use data to assess the performance after deployment.

User-related reports and data exports the system shipment will generate reports based on data, but a comprehensive test of various export formats (CSV, PDF) will not be preferred at this stage. Customers will be provided with database format details so that they can remove and use date data as required.

Cross-broader and device compatibility While basic compatibility will be investigated, comprehensive tests in all browsers, equipment and operating systems will not be conducted at this stage. Primary focus will be on ensuring functionality in major web browsers such as Chrome and Firefox. These features will be re -observed at the later stages of development or during post -deployment maintenance. Any issue arising in these areas will be addressed based on user response and further testing efforts.

6. TESTING APPROACH

6.1 Testing Levels

- UNIT Testing was conducted by the developer and approved by the development team leader. The programmer provided proof of unit testing, including the test case list, sample output, data printouts, and defect information, to the team leader before it was accepted and forwarded to the test person. Additionally, all unit test information was supplied to the test person.
- SYSTEM/INTEGRATION testing was conducted by the test manager and the development team leader, with support from individual developers as needed. No specific test tools were utilized for this project. Programs entered the System/Integration testing phase only after all critical defects had been resolved. A program could have up to two major defects, provided they did not hinder the testing process (i.e., a workaround was available).
- Acceptance testing was conducted by the actual end users with assistance from the test manager and the development team leader. It was carried out alongside the existing manual ZIP/FAX process for one month following the completion of the system/integration testing.

6.2 Test Tools

- SubLime Text
- Xampp Panel
- Selenium IDE
- Visual Studio Test Professional
- Computer

6.3 Meetings

The test team will meet once in every week to evaluate progress to date and to identify error trends and problems as early as possible. The test team leader will meet with development and the project manager once every two weeks as well. These two meetings will be scheduled on different weeks. Additional meetings can be called as required for emergency situations.

7. TEST CASES/TEST ITEMS

Project Name: AgerShipment			Test Designed by: Sakibul Haque	
Test Case ID: FR_1			Test Designed date: 16-January-25	
Test Priority (Low, Medium, High): HIGH			Test Executed by: Sakib Al Mahamud	
Module Name: Authentication (AUTH)			Test Execution date: 18-January-25	
Test Title: Register Valid Case				
Description: Check If register works perfectly with valid information.				
Precondition (If any): N/A				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/ Fail)
1. Go to the website 2. Then Click login 3. Then Click Register Now 4. Put valid Information 5. Click Register Now	Put valid Information and fill up all input level.	Registration must be successful.	As expected	Pass
Post Condition: User account is successfully created and data is stored securely in the database.				

Project Name: AgerShipment			Test Designed by: SAIKOT KUNDU	
Test Case ID: FR_2			Test Designed date: 20-January-25	
Test Priority (Low, Medium, High): HIGH			Test Executed by: SAIKOT KUNDU	
Module Name: Authentication (AUTH)			Test Execution date: 20-January-25	
Test Title: Register Invalid Case				
Description: Test Registration Using Duplicate User Credentials.				
Precondition (If any): Email and Phone number should be registered.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Go to the website 2. Then Click login 3. Then Click Register Now 4. Put valid Information 5. Click Register Now	Put existing email or phone number which already registered	email or number already exist.	As expected	Pass

Project Name: AgerShipment			Test Designed by: Sakibul Haque	
Test Case ID: FR_3			Test Designed date: 16-January-25	
Test Priority (Low, Medium, High): HIGH			Test Executed by: Sakib Al Mahamud	
Module Name: Authentication (AUTH)			Test Execution date: 18-January-25	
Test Title: Login Valid Case				
Description: Check if the login functionality works perfectly with valid Information				
Precondition (If any): User must have an active account.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Go to the website 2. Enter email 3. Enter password 4. Click Login Now	Email: sakib@gmail.com Password: 1234	User should logininto the application	As expected,	Pass
Post Condition: User is validated with database and successfully login to account. The account sessiondetails are logged into the database.				

Project Name: AgerShipment			Test Designed by: SAIKOT KUNDU	
Test Case ID: FR_4			Test Designed date: 20-January-25	
Test Priority (Low, Medium, High): HIGH			Test Executed by: SAIKOT KUNDU	
Module Name: Authentication (AUTH)			Test Execution date: 20-January-25	
Test Title: Login Invalid Case.				
Description: Check if the login functionality works perfectly with invalid Information				
Precondition (If any):				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/ Fail)
1. Go to the website 2. Enter email 3. Enter password 4. Click Login Now	Used not registered email or incorrect password.	incorrect username or password.	As expected,	Pass

Project Name: AgerShipment			Test Designed by: Sakib Al Mahamud	
Test Case ID: FR_5			Test Designed date: 19-January-25	
Test Priority (Low, Medium, High): High			Test Executed by: Nimur Islam	
Module Name: Home Page			Test Execution date: 20-January-25	
Test Title: Homepage Navigation				
Description: Verify navigation links on the homepage work correctly.				
Precondition (If any): Users must be on the homepage.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Open the homepage. 2. Click on each navigation link (e.g., About, Menu, Order). 3. Verify the redirection to the correct pages.	Navigation links.	Each link redirects to the correct page.	As expected,	Pass
Post Condition: User is redirected to the respective page after clicking the navigation link.				

Project Name: AgerShipment			Test Designed by: Sakib Al Mahamud	
Test Case ID: FR_6			Test Designed date: 19-January-25	
Test Priority (Low, Medium, High): High			Test Executed by: Sakibul Haque	
Module Name: Home Page			Test Execution date: 20-January-25	
Test Title: Homepage Banner Display				
Description: Verify the homepage banner loads correctly.				
Precondition (If any): User must be on the homepage.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Open the homepage. 2. Check the banner for text, images, and functionality (e.g., links/buttons).	Banner elements.	The banner is displayed properly without distortion.	As expected,	Pass
Post Condition: Homepage banner is displayed with correct text and images.				

Project Name: AgerShipment			Test Designed by: Sakib Al Mahamud	
Test Case ID: FR_7			Test Designed date: 19-January-25	
Test Priority (Low, Medium, High): High			Test Executed by: Nimur Islam	
Module Name: Home Page			Test Execution date: 20-January-25	
Test Title: Validate About Page Information				
Description: Check if all content on the About page is displayed correctly.				
Precondition (If any): User must be on the About page.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Navigate to the About page. 2. Verify the presence of text and images. 3. Check for formatting consistency.	Content elements (text, images).	Content appears correctly without formatting issues.	As expected,	Pass
Post Condition: All content on the About page is displayed correctly, with no broken images or formatting issues.				

Project Name: AgerShipment			Test Designed by: SAIKOT KUNDU	
Test Case ID: FR_8			Test Designed date: 20-January-25	
Test Priority (Low, Medium, High): High			Test Executed by: SAIKOT KUNDU	
Module Name: Home Page			Test Execution date: 20-January-25	
Test Title: Validate Explore Page functionality.				
Description: Browse product.				
Precondition (If any): User must be on the Explore page.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Navigate to the Explore page. 2. Verify the presence of text and images for all products. 3. Check for view product functionality.	Content elements (text, images) and view product button functionality.	Content appears correctly and view the product also correctly.	As expected,	Pass
Post Condition: Products on the Explore page is displayed correctly, with no broken images or such issues.				

Project Name: AgerShipment			Test Designed by: Sakib Al Mahamud	
Test Case ID: FR_9			Test Designed date: 20-January-25	
Test Priority (Low, Medium, High): High			Test Executed by: Nimur Islam	
Module Name: Home Page			Test Execution date: 20-January-25	
Test Title: Validate Contact Form Submission.				
Description: Ensure the contact form works with valid inputs.				
Precondition (If any): User must be login the website.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Navigate to the Contact Us page. 2. Fill in valid inputs (e.g., name, email, message). 3. Submit the form.	Form fields.	Confirmation message is displayed after successful submission.	As expected,	Pass
Post Condition: User receives a confirmation message, and the contact request is sent successfully.				

Project Name: AgerShipment			Test Designed by: SAIKOT KUNDU	
Test Case ID: FR_10			Test Designed date: 20-January-25	
Test Priority (Low, Medium, High): High			Test Executed by: SAIKOT KUNDU	
Module Name: Profile			Test Execution date: 20-January-25	
Test Title: Profile Information Functionality.				
Description: Test all dashboard functionality for user.				
Precondition (If any): User must have valid account and log in then enter into profile page.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Go to login 2. Put valid username and password 3. Then click to profile icon 4. Select profile	Database data	Data will show dynamically from the server-side to client side.	As expected,	Pass

Project Name: AgerShipment			Test Designed by: Sakib Al Mahamud	
Test Case ID: FR_11			Test Designed date: 20-January-25	
Test Priority (Low, Medium, High): High			Test Executed by: Sakibul Haque	
Module Name: Profile			Test Execution date: 20-January-25	
Test Title: Validate Profile Editing.				
Description: Ensure users can update their profile information.				
Precondition (If any): User must be logged in and on the profile page.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Navigate to the profile page. 2. Update user information. 3. Save changes.	Profile fields.	Profile updates are saved successfully.	As expected,	Pass
Post Condition: Updated user details are saved successfully, and the profile page reflects the changes.				

Project Name: AgerShipment			Test Designed by: Sakib Al Mahamud	
Test Case ID: FR_12			Test Designed date: 20-January-25	
Test Priority (Low, Medium, High): High			Test Executed by: Sakibul Haque	
Module Name: Order Management			Test Execution date: 20-January-25	
Test Title: Validate Order Placement				
Description: Ensure an order can be placed successfully with valid inputs.				
Precondition (If any): User must have items in the cart.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Add items to the cart. 2. Navigate to the order page. 3. Fill in valid information and place the order.	Order form inputs.	Order is placed successfully, and confirmation is displayed	As expected,	Pass
Post Condition: Order is successfully placed, and the user is redirected to an order confirmation or receipt page.				

Project Name: AgerShipment			Test Designed by: Sakib Al Mahamud	
Test Case ID: FR_13			Test Designed date: 20-January-25	
Test Priority (Low, Medium, High): High			Test Executed by: Nimur Islam	
Module Name: Search			Test Execution date: 20-January-25	
Test Title: Verify Search Results.				
Description: Check if the search function returns relevant results.				
Precondition (If any): User is on the Search page.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Enter valid search queries. 2. Click the search button. 3. Verify the displayed results.	Search terms.	Results relevant to the query are displayed.	As expected,	Pass
Post Condition: User sees search results relevant to the query or a " no products added yet!" message for invalid queries.				

Project Name: AgerShipment			Test Designed by: Sakib Al Mahamud	
Test Case ID: FR_14			Test Designed date: 20-January-25	
Test Priority (Low, Medium, High): High			Test Executed by: Nimur Islam	
Module Name: Cart			Test Execution date: 20-January-25	
Test Title: Validate Adding Items to Cart.				
Description: Check if items are added to the cart successfully.				
Precondition (If any): User must have an account.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Select an item and add it to the cart. 2. Navigate to the cart page. 3. Verify the item details in the cart.	Menu items.	Selected items are added to the cart.	As expected,	Pass
Post Condition: The item is successfully added to the cart and reflected on the cart page.				

Project Name: AgerShipment			Test Designed by: SAIKOT KUNDU	
Test Case ID: FR_15			Test Designed date: 20-January-25	
Test Priority (Low, Medium, High): High			Test Executed by: SAIKOT KUNDU	
Module Name: Cart			Test Execution date: 20-January-25	
Test Title: Remove Product				
Description: Remove Product from Cart.				
Precondition (If any): User must log in with valid account and stay on cart page and already added one product.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Navigate to the Cart page. 2. Verify already added one product. 3. Apply remove sign or Delete All.	Already added product.	Remove Product from the cart section (both are working).	As expected,	Pass
Post Condition: Products on the Cart page will be removed for specific user profile.				

Project Name: AgerShipment			Test Designed by: SAIKOT KUNDU	
Test Case ID: FR_16			Test Designed date: 20-January-25	
Test Priority (Low, Medium, High): High			Test Executed by: SAIKOT KUNDU	
Module Name: Cart			Test Execution date: 20-January-25	
Test Title: Continue Shopping				
Description: Continue Shopping after adding a product to the Cart.				
Precondition (If any): User must log in with valid account and stay on cart page.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Navigate to the Cart page. 2. Verify already added one product. 3. Apply Continue Shopping.		Redirected to the explore page.	As expected,	Pass
Post Condition: Products on the Explore page is displayed correctly, with no broken images or such issues.				

Project Name: AgerShipment			Test Designed by: SAIKOT KUNDU	
Test Case ID: FR_16			Test Designed date: 20-January-25	
Test Priority (Low, Medium, High): High			Test Executed by: SAIKOT KUNDU	
Module Name: Buy Product			Test Execution date: 20-January-25	
Test Title: Checking buy product functionality.				
Description: Describe the whole process for buying a product.				
Precondition (If any): User must log in with valid account and stay on cart page and already added one product.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Navigate to the Cart page. 2. Verify already added one product. 3. Apply Proceed to Checkout. 4. Choose Payment Method 5. Then Click Place Order.	Already added product from Explore which user want to buy.	Inform to the vendor about customer.	Place Order function is not developed.	Fail
Post Condition: Products on the Explore page is displayed correctly, with no broken images or such issues.				

Project Name: AgerShipment			Test Designed by: SAIKOT KUNDU	
Test Case ID: FR_17			Test Designed date: 20-January-25	
Test Priority (Low, Medium, High): High			Test Executed by: SAIKOT KUNDU	
Module Name: Log Out			Test Execution date: 20-January-25	
Test Title: Log Out Session.				
Description: User will log out from the session.				
Precondition (If any): Must be logged in.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Log in with valid username and password. 2. Click on Profile Icon. 3. Apply Log Out.		User will log out from the session.	As expected	Pass
Post Condition: User will be redirected to the landing page.				

8. ITEM PASS/FAIL CRITERIA

Pass Criteria: A function is taken into consideration passed if it meets the subsequent situations:

1. It functions as meant without mistakes or failures.
2. It efficaciously procedures reassigned sales information from the initial set of distributors for a period of 1 month.
3. The Electronic Data Interchange (EDI) records balances correctly with the parallel ZIP/FAX statistics.
4. The sales administration body of workers verifies and confirms the accuracy of the processed records.
5. Upon successful verification, the initial set of distributors is transitioned to energetic fame, and parallel facts collection is stopped for the one's accounts.

Fail Criteria: A feature is considered failed if any of the following occur:

1. The feature does not function as expected due to improper development, as seen in the payment feature failure.
2. Reassigned sales data from the initial distributors is not processed correctly for the required one-month period.
3. The EDI data does not reconcile with the ZIP/FAX data received in parallel.
4. The sales administration staff identifies discrepancies or inaccuracies in the data, leading to rejection.
5. The feature fails to support the transition of distributors to active status or does not allow stopping parallel data collection.

These pass/fail criteria ensure that only fully functional and verified features are approved while identifying and addressing any failed functionalities before the system goes live.

9. TEST DELIVERABLES:

The list of things that will be delivered from the testing team is given below:

- Test Plan
- Test Cases
- Test Script
- Test Summary Report
- Execution Log
- Defect Log
- Test Summary Report
- Requirements Traceability Matrix (RTM)

10. STAFFING AND TRAINING NEEDS

Since this is a medium-sized project, some employees will be required for testing. However, it cannot be guaranteed that they will be familiar with all aspects of the software. In such cases, training can be provided to them.

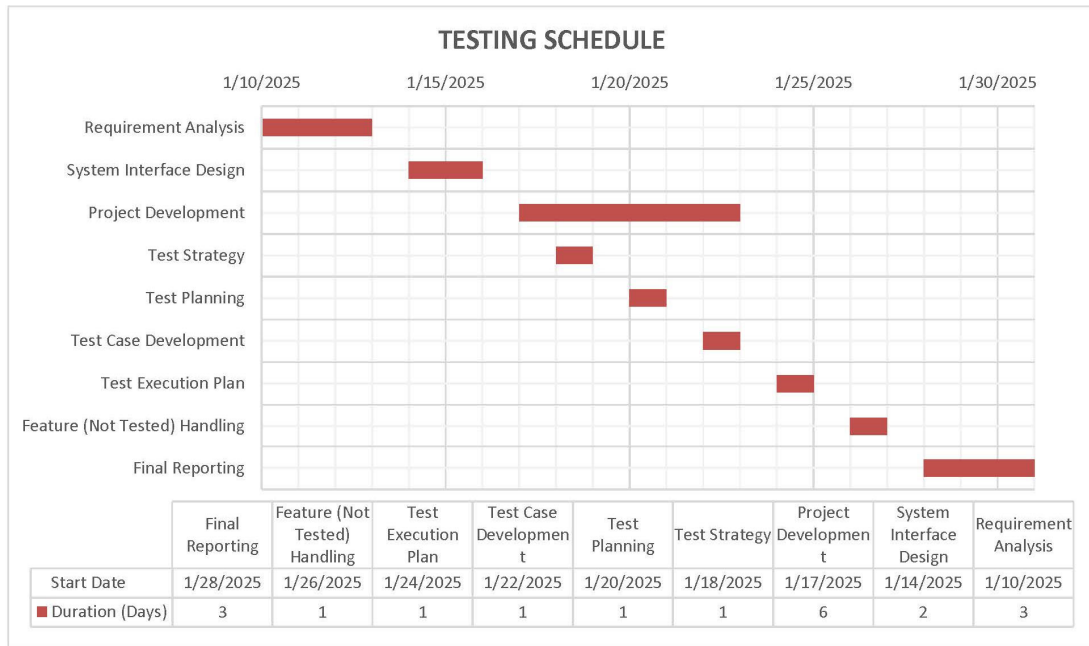

11. RESPONSIBILITIES

Task	Business Analyst	Project Manager	Development Team	Test Team	Client
Requirement Analysis	✓ (Lead)	✓ (Oversee)	◇ (Assist)	✗	✓ (Provide Input)
System Interface Design	✓ (Specify Requirements)	✓ (Coordinate)	✓ (Develop)	◇ (Review)	✗
Project Development	◇ (Consult)	✓ (Manage)	✓ (Implement)	✗	✗
Test Strategy	◇ (Assist)	✓ (Plan)	✗	✓ (Lead)	✗
Test Planning	◇ (Assist)	✓ (Approve)	✗	✓ (Lead)	✗
Test Case Development	✗	✗	✗	✓ (Create)	✗
Test Execution Plan	✗	✓ (Monitor)	✗	✓ (Execute)	✗
Feature (Not Tested)	✓ (Analyze Impact)	✓ (Report to Stakeholders)	✓ (Address Issue)	✓ (Flag For Testing)	✗
Final Reporting	✓ (Contribute to business impact)	✓ (Summarize Findings)	◇ (Provide Technical Insights)	✓ (Provide Test Results)	✓ (Receive Reports)

Related Notes:

- ✓ = Primary Responsibility
- ◇ = Supporting Role
- ✗ = Not Typically Involved

12. TESTING SCHEDULE

This Gantt Chart is created using Excel.

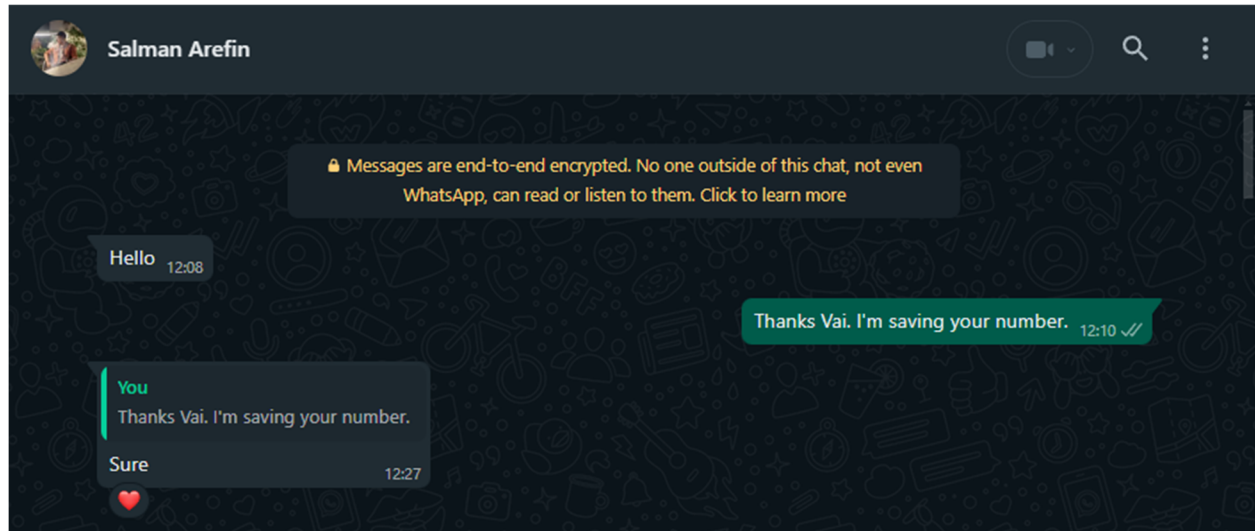

13. PLANNING RISKS AND CONTINGENCIES

Many times, some test cases cannot be executed first without completing other dependent classes. In such situations, a stub should be used. Without a stub, trying to implement dependent testing cases can lead to testing failure. Therefore, careful attention should be paid when writing test cases. Additionally, the backup team members should be nominated in advance to handle the emergency or step if necessary.

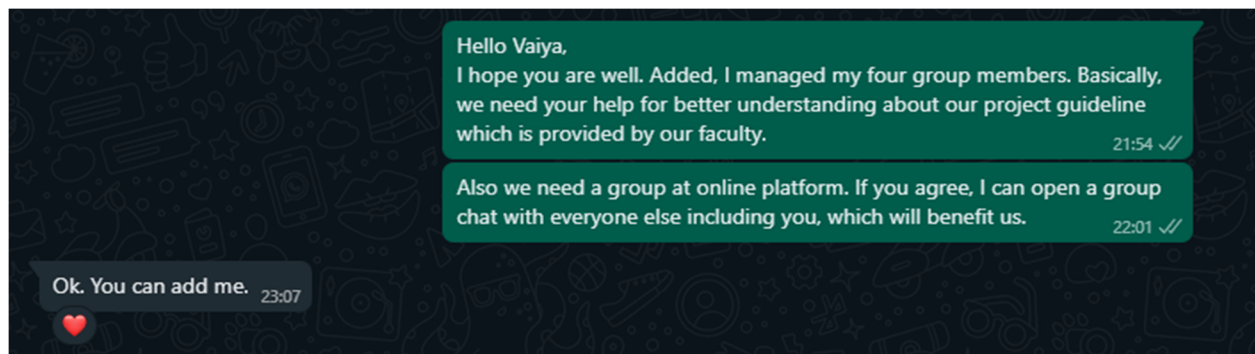

14. APROVALS

Project Sponsor	Fronture Technologies
Development Manager	MD. SAKIBUL HAQUE TANMOY
Team Lead	MD. SALMAN AREFIN
Test Manager/Tester	SAIKOT KUNDU
Test Manager	SAKIB AL MAHAMUD
Test Executed BY	SAIKOT KUNDU, SAKIB AL MAHAMUD, NIMUR ISLAM JOY, MD. SAKIBUL HAQUE TANMOY
Project Analysis	NIMUR ISLAM JOY

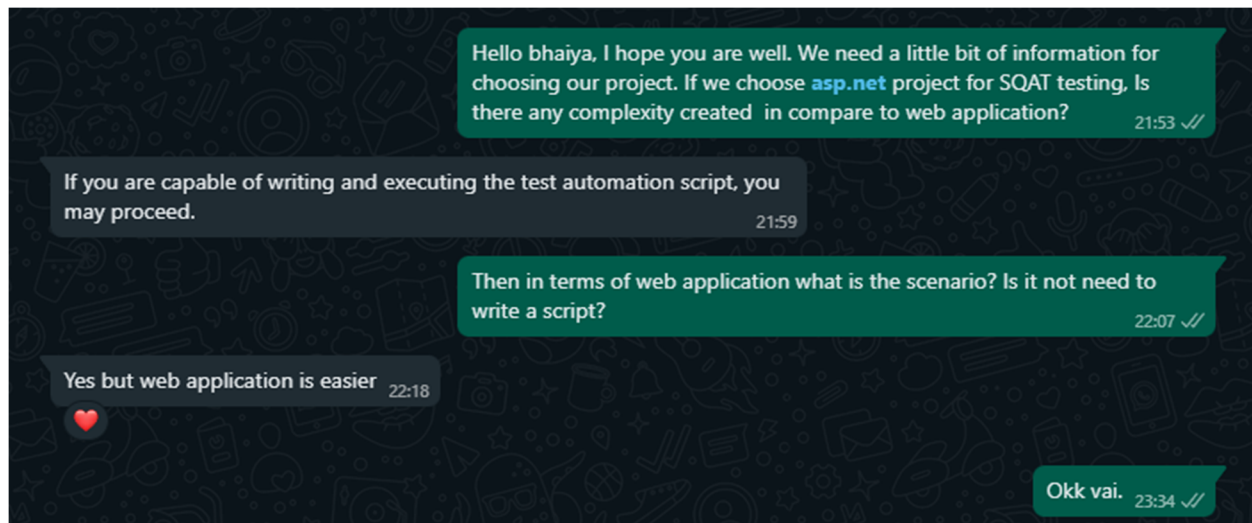

15. PROOFS AND SCREENSHOTS

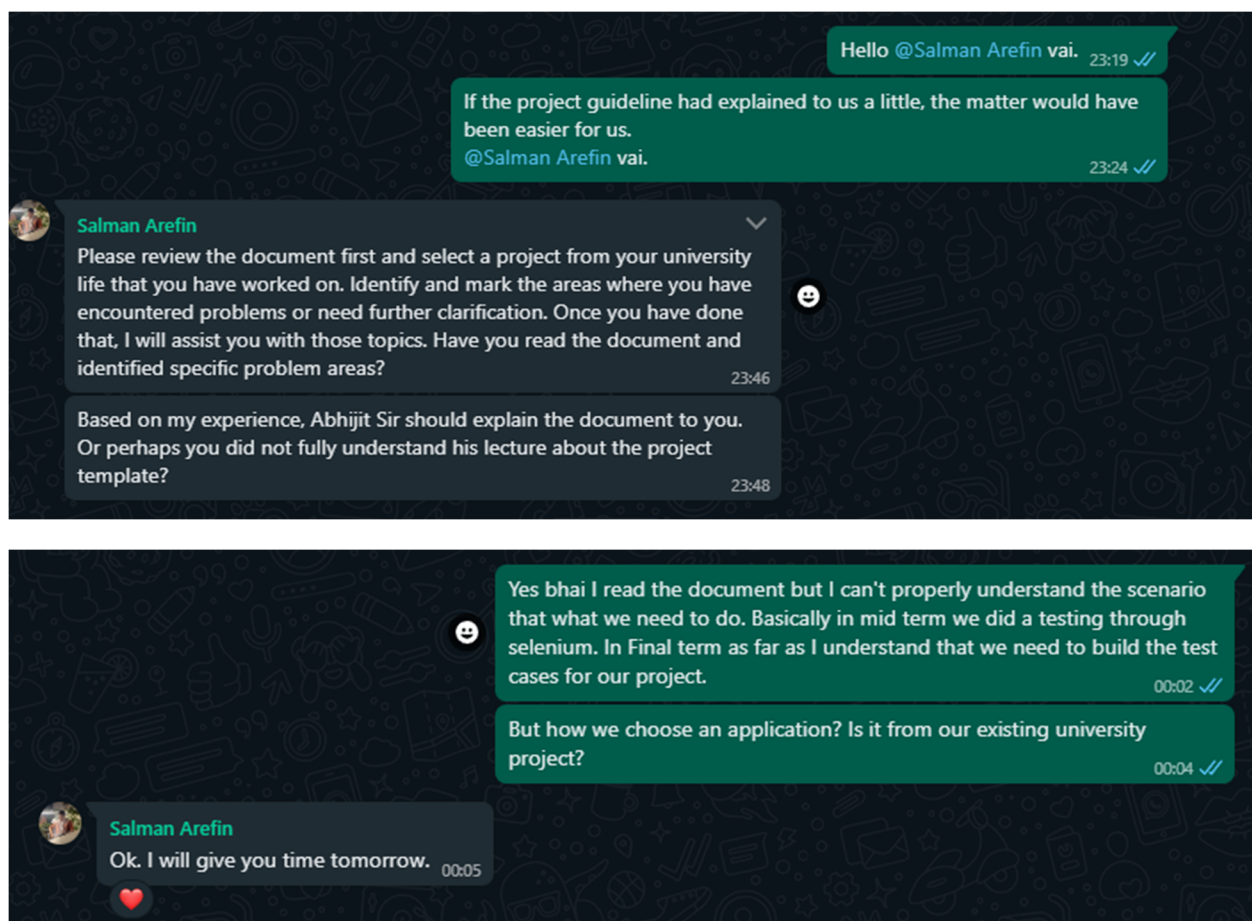

Connecting with our industry personnel Mr. Salman Arefin from Fronture Technologies

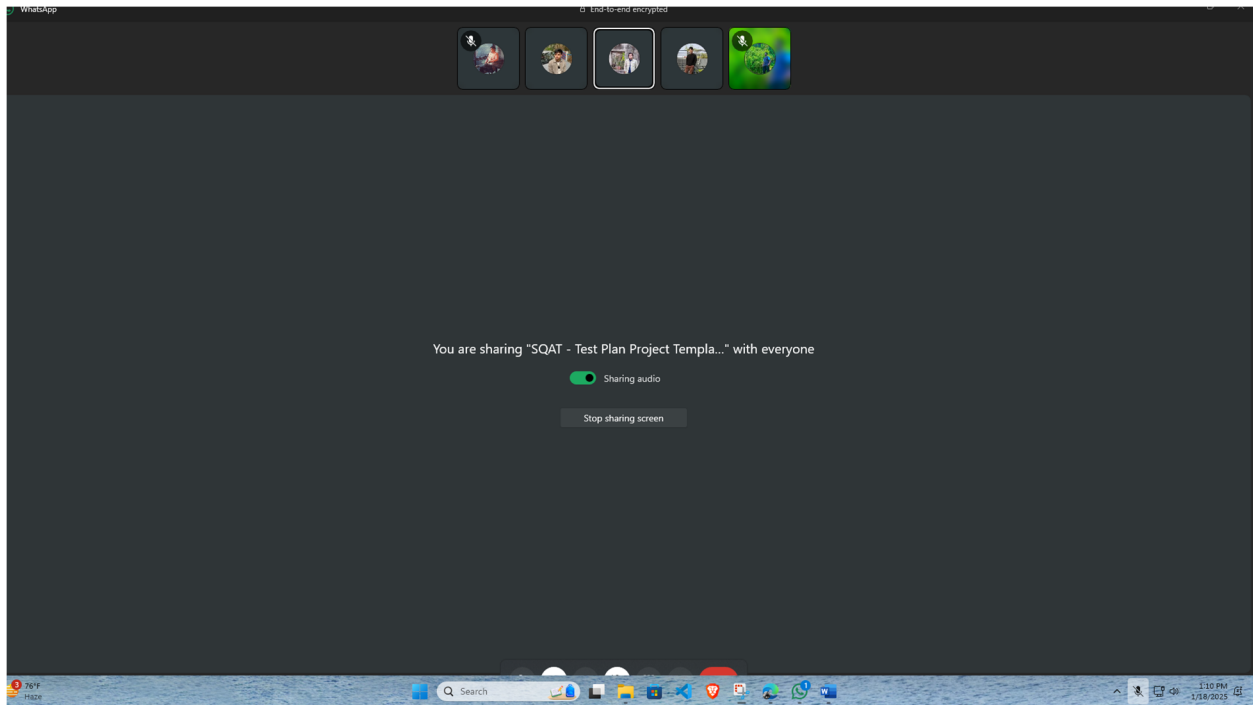

Asking him to grant our group on the online platform

Asking for help to choose the application type

Asking for help to describe the proper project scenario through a meeting

Our meeting with Mr. Salman Arefin including four members

The day of our visit to the industry. Present are four members of our group together with Mr. Salman Arefin and Mr. Aditya Dey, a software engineer L2 (quality assurance & support).
